

Subject Study ID Formats

IMPORTANT INFORMATION

If subject study IDs are included when subjects are registered, they are checked against known patterns. If the pattern is unknown, then the data is put into quarantine. You do not have to use a subject study ID, but if you do then you must tell us, and let us know the format of the ID.

If you add or change subject study ID formats you ***MUST*** let us know, otherwise your data will go into quarantine.

The currently used formats are below.

[0-9]- any digit

[a-Z] - any letter, upper or lower case

[0-9a-Z] - any letter or number

Otherwise, all characters outside of square brackets are themselves

Each pattern below is followed by an example. All the patterns and examples should be on one line only.

Format	Pattern	Example
fMRI-REDIT-A	FR[0-9][0-9][0-9]	FR123
fMRI-REDIT-B	FR[0-9][0-9][0-9][a-Z]	FR123A
U-change	[0-9][0-9][0-9][0-9][0-9]	12345

Special Case FIL Subjects

pattern=[a-Z] e.g B

This is used when a subject is taken out of the scanner before being rescanned later that day, and are required to be registered again with the same M-number. The single letter is used to denote different sessions that day.

The data acquisition times are used during anonymisation to check if the same M-number has been used for more than one subject. If so, the data is quarantined. Taking a subject out of the scanner and registering them again using the same M-number will trigger this check. The use of a single letter when registering effectively stops the check.
